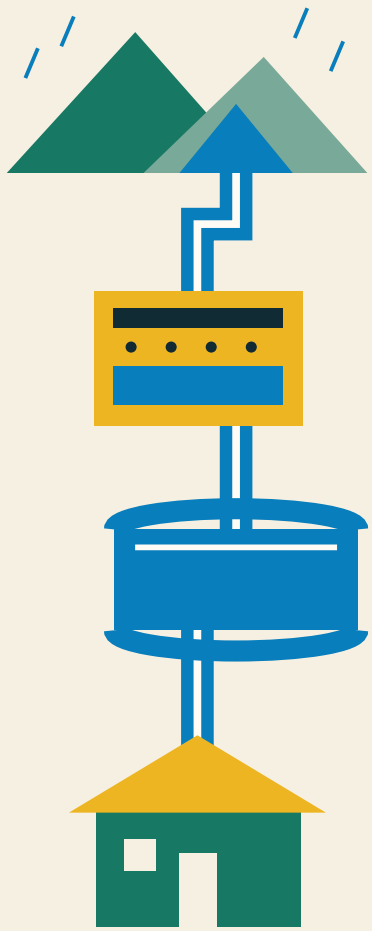
RAIN *is only the* beginning.

WHAT MAKES WATER REACH THE TAP?



01 SOURCE

Catchments and intakes supply raw water.

Dry weather can reduce river flow.

02 TREAT

Remove particles, disinfect and test.

Muddy stormwater can interrupt treatment.

03 STORE

Keep a reserve. Help manage pressure.

Storage provides a buffer when supply varies.

04 DELIVER

Pumps, pipes and valves move water.

Pipe damage or power loss can stop delivery.

Every link needs people, maintenance and a safe backup.
